

Proper Towing & Transport

DOT requires that all vehicles have secure loads. So, when towing with a Flatbed Carrier or a Wrecker, the vehicles must have proper tie-downs.

Carriers require chains or straps to prevent the vehicle from moving in any direction.

Wreckers and Wheel Lifts require Wheel Straps and Safety Chains to prevent a loss of the towed vehicle.

Remember to use a steering wheel strap when towing vehicles from the rear.

DOT requires all vehicles being towed behind a Carrier or Wrecker to have Tow Lights on the rear of the towed vehicle.
